

Dave's description

These were built from the Revell kit. This 911 Porsche is the 993. Unfortunately, the model kit is based on the previous 911, the 964. Revell only changed the body which is pretty accurate. I redid the front seats, rear seats and left and right door panels. I then cast those parts in resin.

- the maroon one is the turbo
- the green one is my car with accurate Zero paint
- the cabriolet has the ducktail which I cast
- the yellow and red one is done as a track day car with the logo of our local Porsche club

Thanks to Paul for Zero paint and Rene for yellow and maroon paint
